AUTHOR: Keres, Kh.

TITLE: The correspondence principle in the general theory of relativity

SOURCE: Zh. eksper. i teor. fiz., v. 46, no. 5, 1964, 1741-1754

TOPIC TAGS: relativity theory, correspondence principle, gravitational field, Petrov classification, geodesic coordinate

ABSTRACT: In Newtonian theory the gravitational field may be described in terms of a suitably chosen coordinate system by means of the coefficients of the line element of three-dimensional Euclidean space. Therefore, the relativistic theory of gravitation can be directly compared with the Newtonian theory. A limiting process in which the gravitational fields of the general theory of relativity tend toward the corresponding fields of Newtonian theory is described. A correspondence of quantities of the general theory of relativity with quantities of Newtonian theory is established.

Card- 1/2

ACCESSION NR: AP4037587

The Newtonian limit is computed for a gravitational field of the second type (according to Petrov's classification) admitting a group of motions of maximum order G₆. Orig. art. has: 83 formulas.

TITLE: Theory of the inertion field in the general theory of relativity

PERIODICALS: Referativnyy zhurnal, Matematika, no. 10, 1960, 103, abstract 11722. (Tr. In-ta fiz. i astron. AN EstSSR, 1959, No. 9, 3-42)

TEXT: A continuation of the investigation of the author (RZhMat, 1958, 4192) on the equations of general mechanics, hydrodynamics and electrodynamics in three-dimensional formulation in the general theory of relativity. The paper consists of three parts. In the first part the author considers the generalized inertial system which is given by the interval $ds^2 = c^2dt^2 - \sum_{jk} dx^j dx^k$. X

In order to obtain the equations of mechanics (inclusively hydrodynamics) and of electrodynamics in the variable inertion field, at first there are set up classical equations and then there are obtained "semirelativistic" equations (with explicitly occurring time) with the aid of the covariant transition. In the second part the equations of the inertion field are investigated on the basis of Einstein's

Card 1/3

Theory of the inertion field...

S/044/60/000/010/012/021
C111/C335

equations, and a successive approximation method is proposed for their solution (a parameter is introduced which is set equal to one at the end of the calculations). The question of convergence is not considered. Also boundary conditions are not considered. The question on the equations for the spatial metric of the inertial system and their integration by successive approximations is separately considered. In the third part which is in intimate connection with the investigations of (Kirkwood R.L., Phys.Rev., 1953, 92; 1954, 95), the equations of electrodynamics and of the inertion field are investigated in the non-inertial coordinate systems of the three-dimensional Euclidean space. Here especially the Maxwell-Lorenz equations are obtained in a moving coordinate system. They read:

$$\text{rot}(\mathbf{E} + (1/c)[\mathbf{H}, \mathbf{v}]) + (1/c)(\partial \mathbf{H} / \partial t) = 0, \quad \text{div } \mathbf{H} = 0,$$
$$\text{rot}(\mathbf{H} - (1/c)[\mathbf{E}, \mathbf{v}]) - (1/c)(\partial \mathbf{E} / \partial t) = (4\pi/c)\mathbf{w}, \quad \text{div } \mathbf{E} = 4\pi,$$

where \mathbf{v} -- transmission speed, $\mathbf{w} = \mathbf{v} + \mathbf{A}$, \mathbf{H} -- relative speed. Representations of the field by potentials are given too: $\mathbf{H} = \text{rot } \mathbf{A}$, $\mathbf{E} + (1/c)[\mathbf{H}, \mathbf{v}] = -\text{grad } \varphi - (1/c)(\partial \mathbf{A} / \partial t)$. The Lorenz condition is written in the form: $\text{div} (\mathbf{A} + (1/c)[\mathbf{H}, \mathbf{v}] + (1/c)(\partial \mathbf{A} / \partial t)) = 0$, $\varphi = \varphi - (1/c)(\mathbf{A}, \mathbf{v})$.

Card 2/3

Theory of the insertion field...

22589
S/044/60/000/010/012/021
C111/C333

the Lorenz force is $\vec{F} = q(\vec{E} + (1/c)[\vec{v}, \vec{H}])$. The notion of the accompanying space is introduced which is obtained with the aid of the transformation of the interval $ds^2 = (c^2 - v^2)dt^2 + 2v_i x_i dt - dx_i dx_i$ to new variables x_i according to the formulas $x_i = a_{ik}(t)z_k + a_i$, where $a_{1i} a_{1k} = \delta_{ik}$. As an example the centrosymmetrical field is considered, where $\Psi = -f(r,t)x_i$, and it is shown that such a field leads to the gravitational field of Schwarzschild. For determining the irrotational field of speed there are used successive approximations.

TITLE : Problems in the Swelling of Bare Hides

CRIT. PUB. : Bor. es ciprotechn., 1950, 9, No 1, 11-15

ABSTRACT : Described is a method of measuring the resistance of swollen bare hides and reviewed are certain basic swelling problems involved in the treatment of bare hides with lime solutions. There is a linear dependency between the logarithms of pressure and the degree of deformation. Water content of bare hides has no bearing on the degree of ashing. The measurement of resistance of the swollen bare hides gives better results. This criterion affects greatly the quality of leather.

TITLE: Static Phase-Splitting Circuit for Converting Single-
Phase Into Three-Phase Current

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy,
Elektromekhanika, 1960, Nr 5, pp 130-133 (USSR)

ABSTRACT: The usual objection to static phase conversion is poor
efficiency. The arrangement described has an overall
efficiency, including the motor load, of 72-72% at a
power output of 270W. One phase of the load (a 3-phase
motor operating as a 2-phase motor) is connected directly
to the supply. The other phase is fed via an autotrans-
former and transformer-coupled capacitor as in Fig 1.
The open-circuit and loaded vector diagrams are Figs 2
and 3 respectively. Fig 7 is an experimental result
where output power is measured as a function of capacitance.
There are 7 figures and 4 Soviet references. ✓

INST.
TITLE The Problem of the Reproduction of Antibodies
(Agglutinins) in the OrganismORIG. PUB. Collection: Osnovy Immuniteta, Moscow, 1956,
197-201

ABSTRACT Upon injection of rabbits immunized against typhoid vaccine, following a fall in the titer of agglutinins (TA; from 1:12,800 to 1:800), with the blood of a normal rabbit, there was an increase in the production of antibodies of 12½ times, and this level was held for 5 days. The injection into the skin of streptococci also stimulated an increase in the TA (to 1:12,800) and this effect continued for 30 days. Injection of turpentine intracutaneously for a period of 10 days also increased the TA. Anesthetic 2-day urethane-veronal sleep reduced the stimulating effect of these two substances. -- L.V.Devoyno

"Study of the Sensitivity to Antibiotics of Shigella Strains
Isolated in 1960-1964."

Bucharest, Microbiologia, Parazitologia, Epidemiologia, Vol 11,
No 6, Nov-Dec 66, pp 537-542.

Abstract: As a result of antibiograms performed on all strains
of Shigella isolated in their laboratories between 1960 and
1964, the authors found that all the strains (flexneri, sonnei,
schmitzi) showed a rapid increase in their resistance to chlor-
amphenicol. They also noted a large increase in multiple resis-
tance, ie. resistance not only to the antibiotic used in treatment
but also to the other ones tested; the only exception was neo-
mycin, resistance to which is appearing much more slowly. In
regard to cases of bacteriologically confirmed cases of bacil-
lary dysentery, the odds of encountering resistant bacteria
were 1:1 for streptomycin, 1:2 for chloramphenicol and 1:3 for
for tetracycline.

Investigations on Catalysts, XVIII. Changes in the Order of Reaction,
With Respect to the Acceptor, During Catalytic Hydrogenation!--
Z. Csúros, I. Géczy and T. Keresztesy (Institute of Organic Chemical
Technology, Technical University, Budapest)

Received March 8, 1957
Acta Chimica-Academiae Scientiarum Hungaricæ
1958, Vol 16, Nr 1, p 91

SUMMARY

On the basis of our earlier measurements it was found, in accordance with the investigations of MONTEZ, LIESER and BERNSTEIN, that in the hydrogenation reaction the order of reaction with respect to the acceptor increases, in the majority of cases with the extent of reaction, whereas in certain other cases it proved to be constant, within experimental errors. The rate constant of reaction appeared to be constant during the course of the reaction, being correlated with the quantity of catalyst, as well as with the concentration of the substrate. It seems that no correlation exists in the investigated cases between the order of reaction and the quantity of the catalyst.

Gábor, L. Göczi, T. Koreszty, Acta Chimica
Academie Scientiarum Hungaricana, Vol. 10, 1958, No. 1,
pp. 91-102, 6 figs., 3 tabs.

On the basis of earlier measurements conducted by the authors it was found in accordance with the investigations of Moritz, Lieber and Bernstein that the order of reaction of the hydrogenation reaction referred to the acceptor increases in the majority of cases with the progress of reaction whereas in certain other cases it proved to be constant within experimental error. The rate constant of reaction appeared to be constant during the course of reaction being correlated with the quantity of catalyst and with the concentration of the substrate. It is most probable that there is no definite correlation between the order of reaction and the quantity of catalyst under the investigated experimental conditions.

Soils & Fertilizers

- Changes in the phosphorus content of soil under anaerobic conditions. Béla Kereszteny (Agr. Expt. Inst., Mosonmagyaróvár, Hung.). Agricul. & Tech. 1, Tájékoztatás 2, 185-90 (1963).—Neubauer tests with 12 characteristic northern Transdanubian soils kept under aerobic and anaerobic conditions, resp., showed increases in the content of acid-sol. PO_4 only in soils with a pH value below 8.0, kept under anaerobic conditions. Rye apparently cannot assimilate this excess P. Gley soils are oxidized by the roots of plants. This process reduces the Ehmr-P content of soil to a certain degree after which a rise is observable. I. F.
- (2)

Properties of the materials used for granulating superphosphates. Béla Kereszteny and Olga Kolbal (Agr Expt. Sta., Kozárdi Nagygyár, Hung.). Agronomie 1954, Vol. 17, No. 1, pp. 173-80 (1954) (German summary). To find the most suitable material to be mixed with superphosphate for granulation, several materials and their mixtures with superphosphate were granulated and tested, both in phosphate solv. and resistance to disintegration. From lab and field tests it was concluded that when using org. materials for granulation, these have little effect on improved crops. High-clay substances, or others, causing a decrease in the water solv. of superphosphate are not appropriate. For industrial granulation, all additives not lowering solv. of the superphosphate are acceptable, while for granulation on the farm, chicken manure is recommended with some acidic material added for obtaining sufficient consistency. If the granule size obtained is unsatisfactory, or the granules disintegrate when sown along with the seed, the fertilizer should be spread separately and plowed into the field.

APPENDIX F

✓ Efficacy of artificial mineral fertilizers [Redacted]
[Redacted] [Redacted] [Redacted] [Redacted] [Redacted]
summary. The test was conducted in two stages. In the
initial part of the experiment, the effect of different
concentrations of nitrogenous, phosphatic, and potash fertilizers
on the growth of the plants was determined. In the second
stage, the effect of different combinations of these fertilizers
was studied.

"Role of the Pituitary and Adrenals in the Changes in Leukocyte Count Caused by Endotoxin."

Budapest, Kiserletes Orvostudomany, Vol XVIII, No 4, Aug 66, pages 347-352.

Abstract: [Authors' Hungarian summary] Small doses of *Salmonella typhi* endotoxin do not cause early granulocytosis in hypophysectomized and adrenalectomized rabbits. It can be demonstrated by the administration of ACTH and adrenalin that early granulocytosis can be explained by the activation of the adrenalin-pituitary-adrenocortical system. On the other hand, the late granulocytosis which can be evoked by larger doses is caused by humoral factors the production of which proceeds without the pituitary and the adrenals. 2 Hungarian, 25 Western references.
